DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-20, drawn to a method of manufacturing a semiconductor device, classified in class 438, subclass 122.
 - II. Claim 21, drawn to a semiconductor device, classified in class 257, subclass 717.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process that includes for example, providing a first block having a thermally conductive film on a first side of said block; providing a second block having an elastomer pad thereon; positioning an IC wafer on said first block; bonding the first and second block, wherein said elastomer pad is in contact with said IC wafer; and applying temperature and pressure; and removing said second block.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2823

4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
